2. Before installation

Welcome to JS Multihotel plugin.

Before installing the plugin, please check the minimum server and theme requirements for a correct installation.

Server requirements:

- Word Press 3.2.1 or greater
- PHP 5.2.4 or greater
- Mysql 5.0 or greater
- Apache version 2.2 or greater
- The mod_rewrite Apache module (for permalinks)
- fsockopen support (for payment gateway IPNaccess)
- GD Library active
- Php Safe mode off
- PHP Memory Limit 32 Mb
- PHP Max Upload Size 16 mb

Theme requirements:

No special requirements.

If these criteria are not met you will no doubt run into issues with JS MultiHotel. In case of doubts, please contact us.

3.. Getting Started

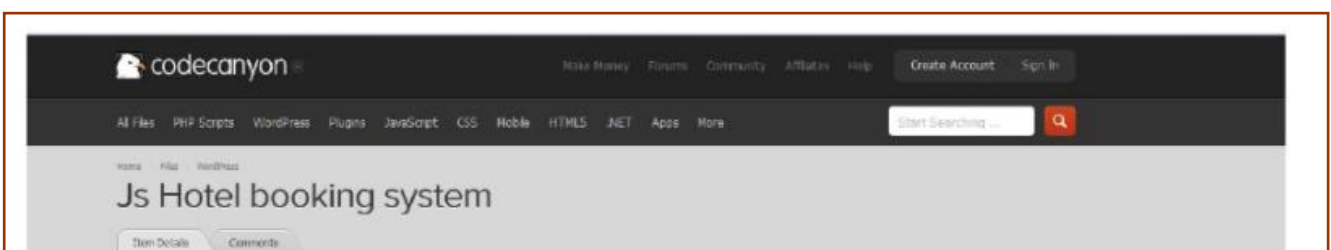

Js MultiHotel will enable online hotel booking rooms in your website. Your visitors will be able to check availability and make online payments and reservations.

It is delivered in a zip file, inside you will find JS-MultipleHotel.

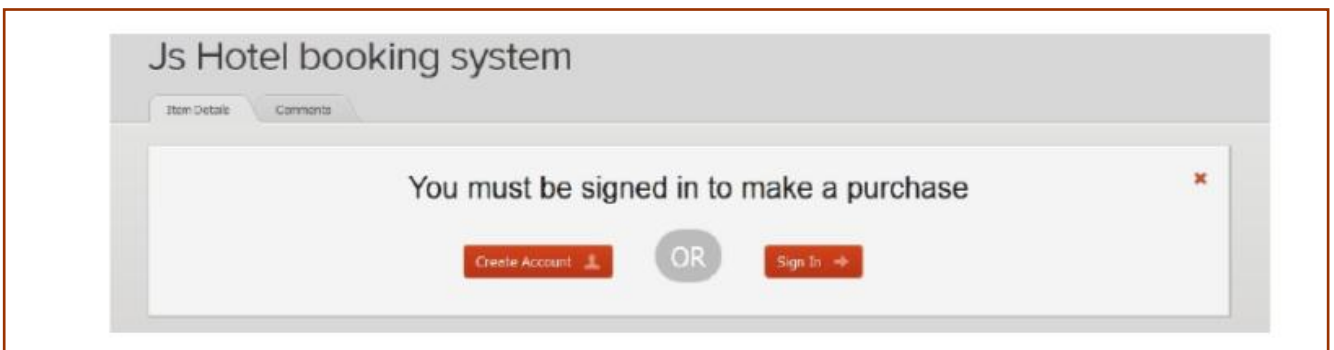

Js MultipleHotel - Allows booking rooms, check availability, online payments ... for an unlimited number of hotels.

Recommended for all range of hotels. From holdings and online hotel reservations agencies to individual hotels, regardless of size.

Before you can upload the plugin, you first need to download it from **Codecanyon.net**

Select **Purchase** option.

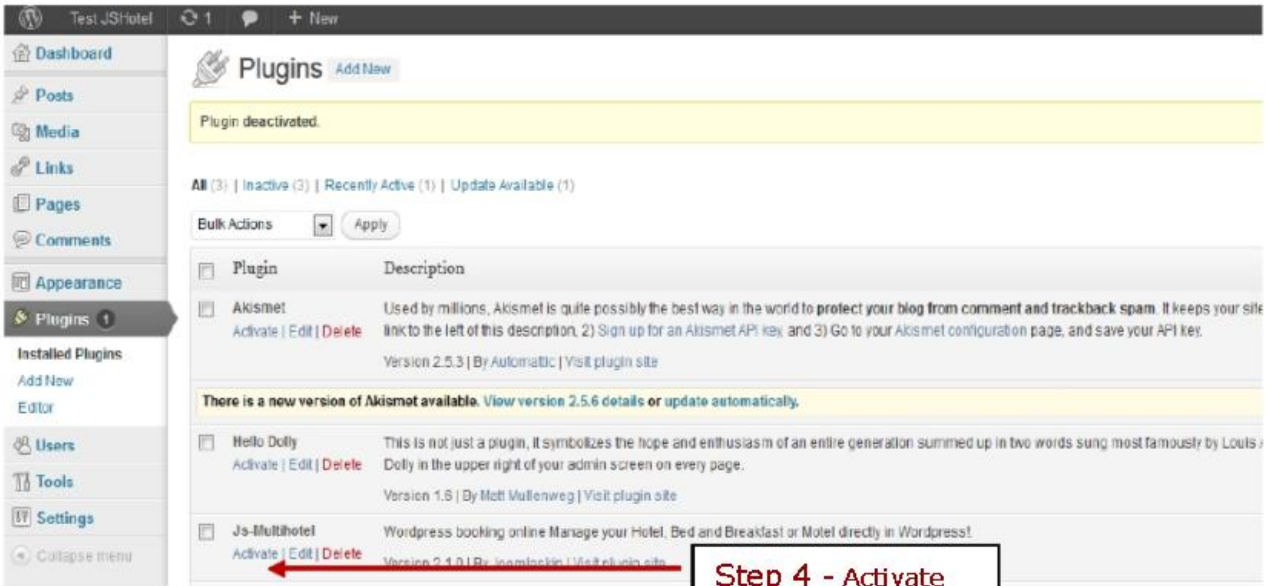

Sign in or create an account if you are not a Codecanyon registered user yet.
After purchase the plugin, click the "download" link to download the plugin file to your computer

4. Plugin installation

Once you have the plugin zip file in your computer, there are two different options to install it.

Manual installation option

- Unzip the plugin zip file
- Inside the JS-Hotel folder you will find MULTIPLE-HOTEL-VERSION (js-multiple folder).
- Via a FTP program, or your hosting control panel, upload the unzipped plugin folder, to your webserver Word Press installation's wp-content/plugins/ directory.
- Log in to your Word Press admin panel, navigate to the Plugins menu and activate the plugin.

Install a plugin in .zip format
If you have a plugin in a .zip format, you may install it by uploading it here.

Step 1 - Click upload

Step 2 - Search for the zip file and select Install now

Upon activation, the Js Hotel plugin will install:

1. The new JSMultihotel menu in your Word press admin panel
2. Specific JSMultihotel bridgets

It is recommended to backup up your Word press installation before install the plugin and at this point, before starting the js-hotel customization.

Please read this guide carefully before start, it will help you to understand the different options you have. A well-planned system contributes significantly to efficiency of operation as well as to a company's image.

5. Getting familiar with JS Multihotel menu

Js Multihotel is a fully web-based, management software plugin, for hotels, and accommodation facilities of all types and sizes.

Js MultiHotel

Configuration

- Manage Country
- Manage City
- Manage Services
- Manage Hotels
- Manage Rooms
- Season Manager
- Manage Availability
- Manage Coupon
- Manage Bookings
- QuickStart
- Support

Js Multihotel offers you all the options you need to create your hotel management.

Find below a detailed description of each option, with some comments that can help you to understand why and how to use Js Multihotel plugin and get its best.

Enjoy !.

IMPORTANT

Set up the system filling the information following the menus starting from top and going down ordering.

If you need sample data as a start point you will find it uploading a demo.

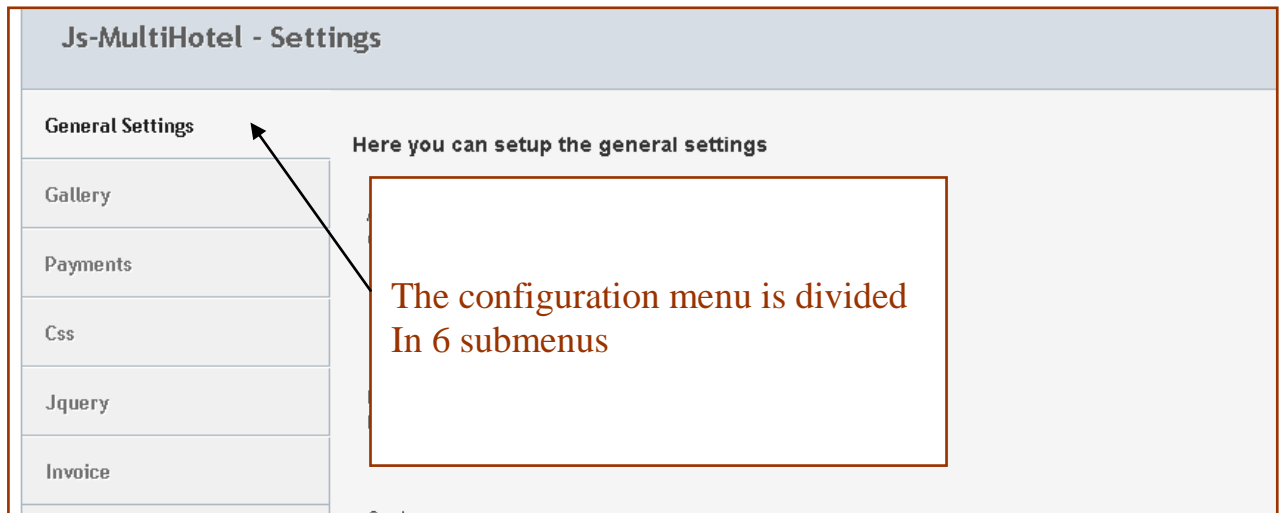

Js MultiHotel

Configuration

- Manage Country
- Manage City
- Manage Services
- Manage Hotels
- Manage Rooms
- Season Manager
- Manage Availability
- Manage Coupon
- Manage Bookings
- QuickStart
- Support

Use the Quickstart installation option to insert sample data (you have also option later to reset db table)

5. Configuration

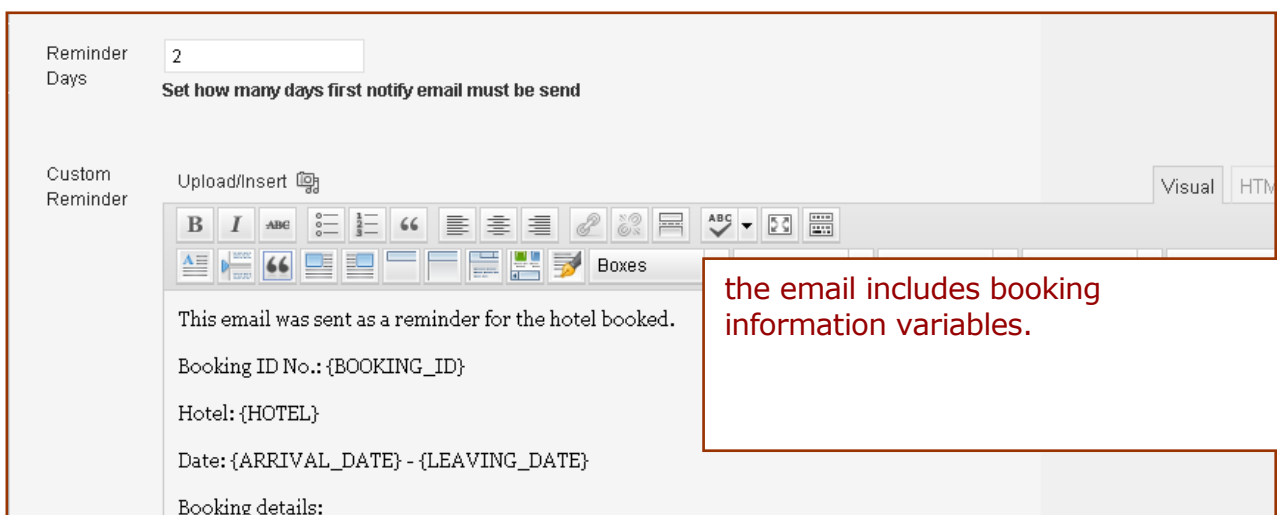

5.1. Configuration: General setting

General settings refer mostly to email customization.

The system will trigger different emails depending on the client actions:

- **Reminder email** - If you would like to sent an email to reminder the client the reservation. Introduce the days before the arrival date the client will receive the email and customize the email content.

- **Contact email** - Introduce the email content

- **Confirmation email** - Introduce the email content

5.1. Configuration: General setting (continue)

SMTP service

If you need to activate SMTP service to send e-mails then set Activate SMTP = Yes and fill the required information. By default the plugin use Php mail function.

Active Smtpt	<input type="radio"/> Yes
	<input checked="" type="radio"/> No
	Active smtp (default: No)
Smtpt Host	<input type="text"/>
	Smtpt Host
Smtpt Port	<input type="text" value="25"/>
	Smtpt Port
Smtpt Username	<input type="text"/>
	Smtpt Username

Data format

By default year - month - day, available day - month - year too.

Format Date	<input type="radio"/> Y-m-d
	<input checked="" type="radio"/> d-m-Y

Post type menu

JS MultiHotel plugin works architecture is based on posts, adding a new hotel adds a posts, a new room adds a posts...

All these posts are hidden. The system works with hidden posts by default, activating this option you can view and modify posts in wordpress, pay attention to this option, it is dangerous because can lead to inconsistencies in the system.

Our recommendation is set hidden by default.

5.1. Configuration: General setting (continue)

Activate post type menu	<input checked="" type="radio"/> Yes <input type="radio"/> No
Activate post type menu (default: No)	

API plugin

API option can be used in commercial themes and give options to control (also by stylesheet):

- Widget: JS Low Cost, JS Popular, JS Map, Slideshow
- Shortcode: JS popular, JS Map, Slideshow

5.2. Configuration: Payments

Use this menu to setup the different payment methods you will accept.

Available Payment options:

Payment method	Info. Required
PayPal	PayPal email
Authorize.net	Api Login ID, Transaction Key, Md5 Setting Mode Testing authorize.net = YES, for testing
Google Checkout	Merchant Id, Merchant Key Sandbox Google Checkout = YES, for testing
Moneybookers	Moneybookers Email
Cash	---

5.3. Configuration: Payments (continue)

Currency

You will find also in this menu the options to setup currencies.

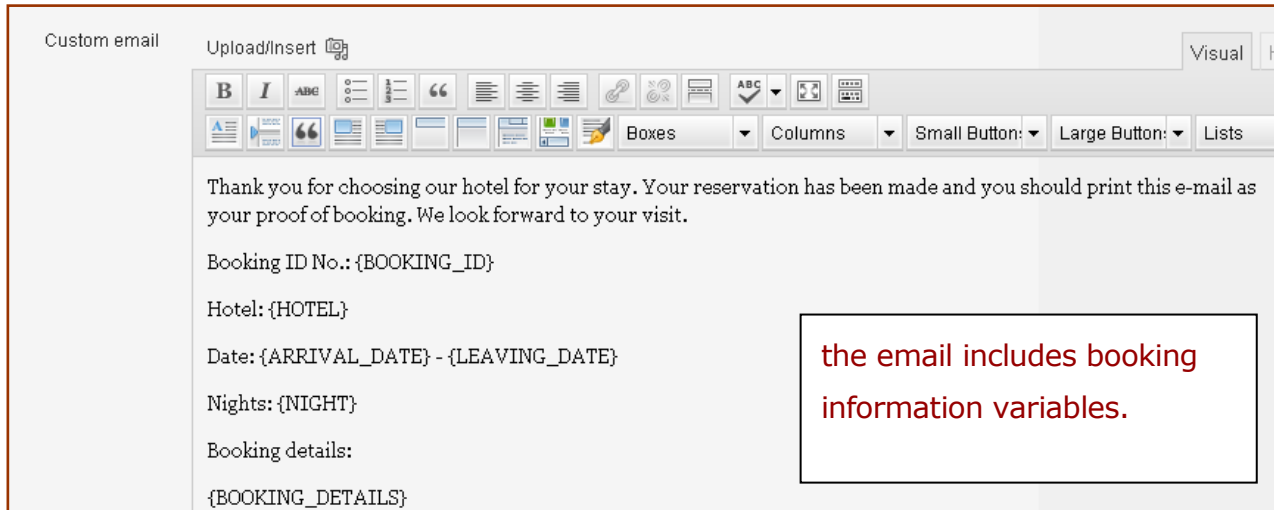

The currency by default is USD, \$. Customize it to fit your needs.

Payments	
Css	Valute <input type="text" value="USD"/> Example (US, EUR, GB)
Jquery	Currency <input type="text" value="\$"/> Example (\$, €, £)

Online booking confirmation email

When an online booking that has been saved on the web has been created, this should trigger an automatic email confirmation to be sent out.

Customize your own confirmation email:

Custom email

Upload/Insert

Visual

Thank you for choosing our hotel for your stay. Your reservation has been made and you should print this e-mail as your proof of booking. We look forward to your visit.

Booking ID No.: {BOOKING_ID}

Hotel: {HOTEL}

Date: {ARRIVAL_DATE} - {LEAVING_DATE}

Nights: {NIGHT}

Booking details:

{BOOKING_DETAILS}

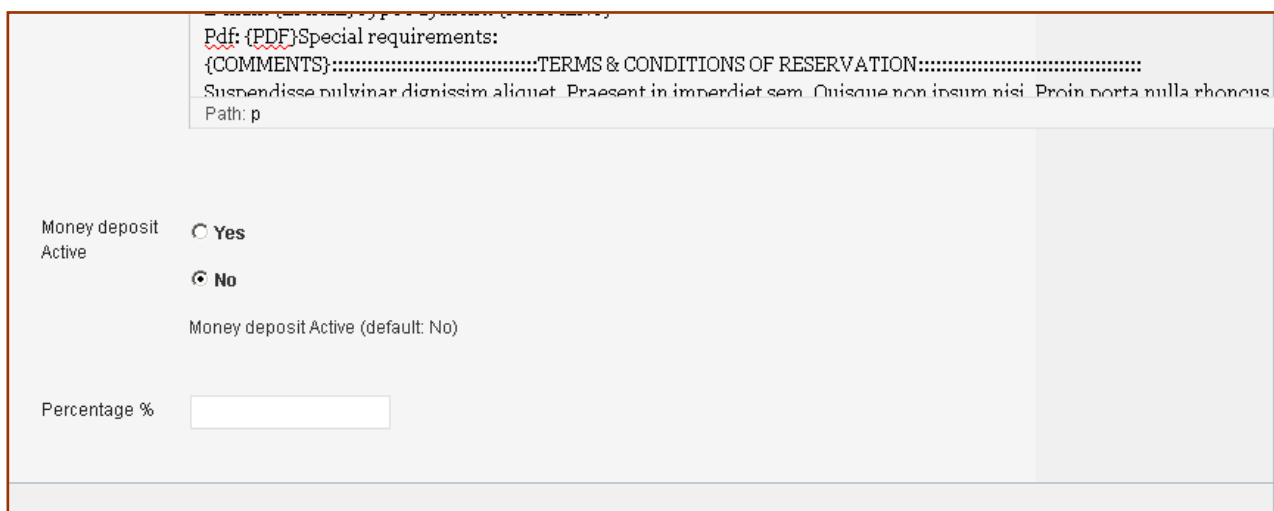

the email includes booking information variables.

IMPORTANT

DO NOT TOUCH THE VARIABLES TO AVOID EMAIL ISSUE

Paying a deposit

If you will request a deposit set Money deposit Active = YES, and insert the %.

Special requirements:

{PDF} {COMMENTS} :::::::::::::::::::: TERMS & CONDITIONS OF RESERVATION ::::::::::::::::::::

Suspendisse vulvar dignissim aliquet. Praesent in imperdiet sem. Quisque non insum nisi. Proin porta nulla rhoncus.

Path: p

Money deposit Active

☐ Yes

☒ No

Money deposit Active (default: No)

Percentage %

5.4. Configuration: Css

Specify if the online booking reservation module styles are taken from the plugin, theme or a customized css file (in this case introduce the path where the file is located).

Js-MultiHotel - Settings	
General Settings	<p>Here you can specify if the plugin must read the theme stylesheet or not, or a custom css</p> <p>Css Location</p> <p> <input checked="" type="radio"/> Plugin <input type="radio"/> Core Wordpress <input type="radio"/> Custom Path <input type="text"/> </p>
Gallery	
Payments	
Css	
Jquery	
Invoice	

5.5. Configuration: JQuery

To avoid javascript conflict you can specify JQuery active, path and "no conflict" mode.

Css		
Jquery	Jquery Location	<input checked="" type="radio"/> Plugin <input type="radio"/> Google CDN <input type="radio"/> Core Wordpress <input type="radio"/> Custom Path <input type="text"/>
Invoice		
	Jquery no conflict	<input checked="" type="radio"/> Yes <input type="radio"/> No <p>Jquery no conflict (default: Yes)</p>

IMPORTANT

Sometimes can be some conflict with javascript used in commercial themes,using "no conflict" mode can help to fix them.

5.6. Configuration: Pdf Invoice

Our plugin generate PDF Invoice with auto increment. Use this option to introduce the title and additional info in the top/header of your invoices.

IMPORTANT

This function require great memory size, pay attention to this

The screenshot shows the 'JS MultiHotel Settings' interface. On the left is a sidebar menu with options: General Settings, Gallery, Payments, Css, JQuery, and Invoice. The 'Invoice' option is selected. The main content area is titled 'Here you can set up admin invoice title and string'. It contains two rows of configuration: 'Header Invoice Title' with a text input field containing 'Invoice Number', and 'Header Invoice String' with a text input field containing 'By Js-Multihotel'.

6. Country and city management: Manage country

Why do you need countries and cities?

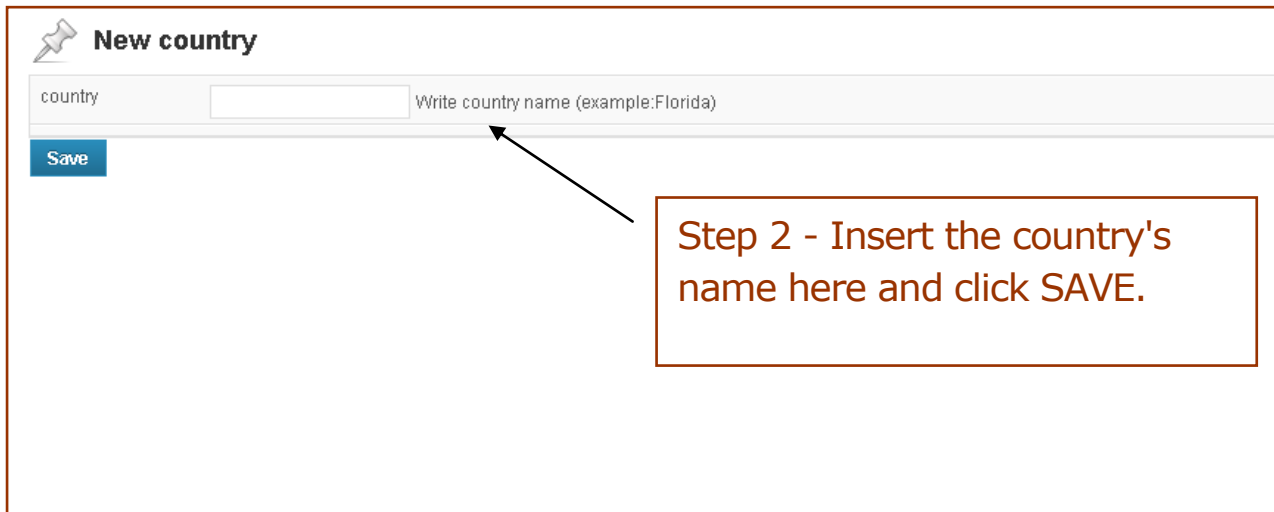

The Country and City are used to help the website end user to find the hotels. You could establish a different search criterion than country/city, like state/city (California/LA). In this example, instead of countries add states in the Manage Country menu.

Other criteria could be hotel-type/city (B&B/Miami)...

Think about the most natural way to search your hotels and feel free to create different options using the manage country and city menus.

The screenshot shows the 'Manage country' interface. At the top left is a pin icon and the title 'Manage country'. To its right is a 'New country' button. Below the title is a 'Bulk Actions' dropdown menu and an 'Apply' button. The main area is a table with columns 'ID', 'country', and 'Options'. The table contains two entries: one with ID '2' and country 'California', and another with ID '1' and country 'Florida'. Each entry has 'Edit' and 'Delete' links in the 'Options' column. At the bottom of the table is another 'Bulk Actions' dropdown and 'Apply' button, followed by a 'Save all changes' button. A callout box on the right side of the interface contains the text: 'Step 1 - Click New country to add a new entry'.

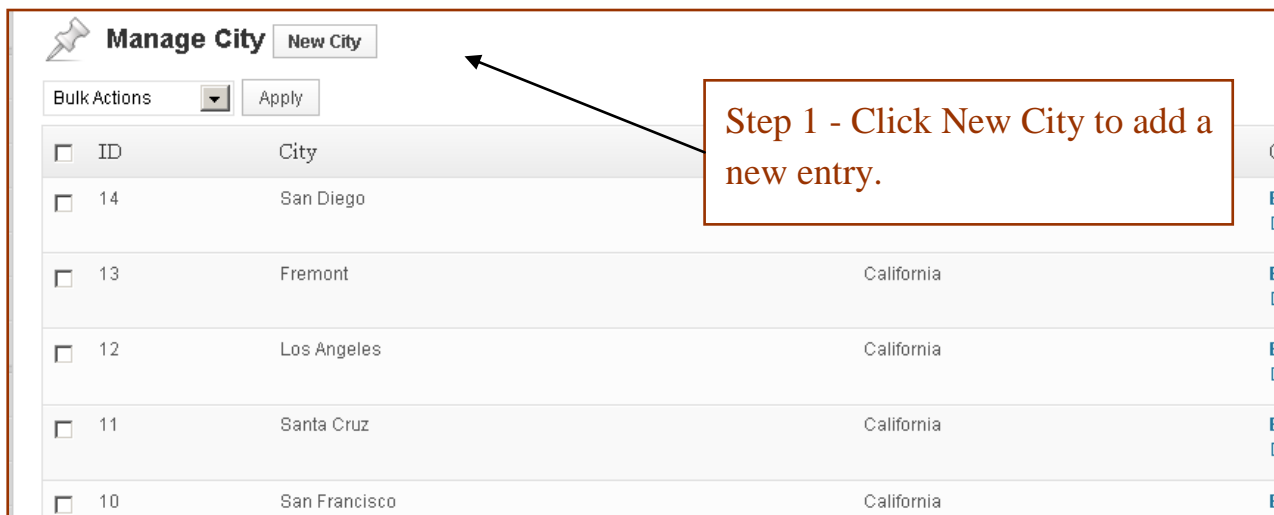

Introduce the countries where your hotels are located.

The screenshot shows the 'New country' form. It has a title 'New country' with a pushpin icon. Below the title is a text input field labeled 'country' with a placeholder text 'Write country name (example:Florida)'. There is a 'Save' button below the input field. An arrow points from a text box to the input field.

Step 2 - Insert the country's name here and click SAVE.

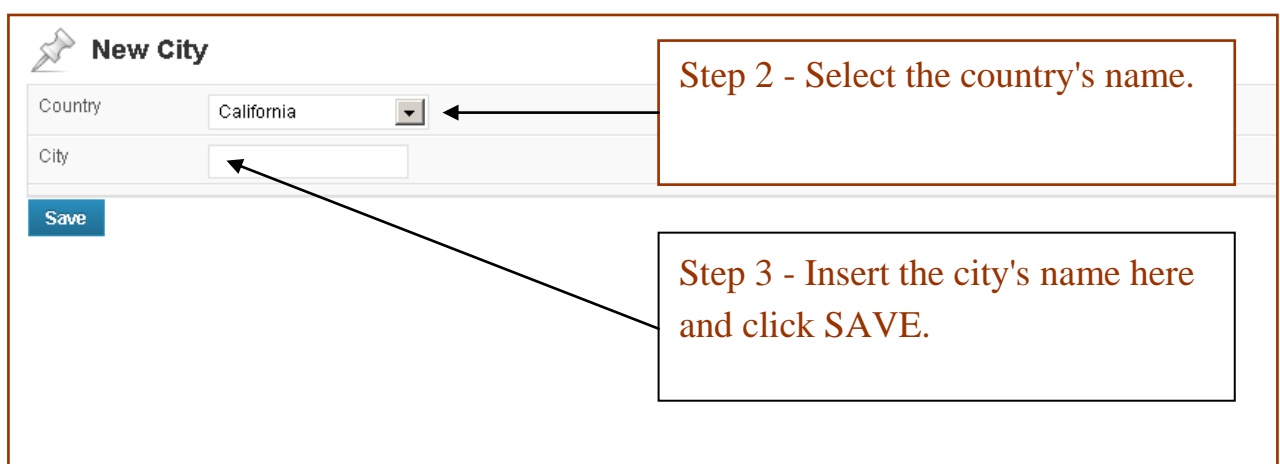

6. Country and city management:Manage city

The screenshot shows the 'Manage City' interface. It has a title 'Manage City' with a pushpin icon and a 'New City' button. Below the title is a 'Bulk Actions' dropdown menu and an 'Apply' button. There is a table with columns 'ID' and 'City'. The table contains several rows of data. An arrow points from a text box to the 'New City' button.

Step 1 - Click New City to add a new entry.

Introduce the cities where your hotels are located.

The screenshot shows the 'New City' form. It has a title 'New City' with a pushpin icon. Below the title is a 'Country' dropdown menu with 'California' selected. There is a 'City' text input field. There is a 'Save' button below the input field. Two arrows point from text boxes to the 'Country' dropdown and the 'City' input field.

Step 2 - Select the country's name.

Step 3 - Insert the city's name here and click SAVE.

7. Accommodation facilities: Manage Services

Use this menu to add the hotel facilities, like Wi-Fi, housekeeping, parking, towels included, airport transfers, cable TV... They will be listed in rooms details pages (left side).

Double

Google Map

You will be able to locate your hotels on the map(with marker), using the google maps utility included in this plugin.

Leave longitude and latitude fields empty, there are filled automatically when you enter the address on the map.

The screenshot shows a web interface for hotel management. At the top, there are two input fields: 'longitude' with the value '41.8996569' and 'latitude' with the value '12.489296500000023'. To the right of these fields, a text box says 'Leave empty! This field are auto populated from Google maps'. Below the input fields, there is a text input field containing 'Viale milano 1 - Roma'. To the right of this field is a button labeled 'address is on the map'. Further right is a text instruction: 'Write Hotel address and city and click on "Address is on the map" button'. Below these elements is a Google Map of Rome. A text box on the right side of the map says 'Enter address and click Address is on the map button.' Arrows point from the text boxes to the 'address is on the map' button and the map area.

Leave longitude and latitude fields empty, they are filled automatically

Leave empty! This field are auto populated from Google maps

Enter address and click Address is on the map button.

8. Hotel management (continue)

Frontend view

The screenshot displays the 'Last Hotels' section of a website. It features two hotel listings: 'Hotel Luxury' and 'Hotel california'. Each listing includes a hotel name, location, star rating, a brochure link, a map view link, and a contact link. A detailed description and a 'Book Now' button are also visible for the first hotel. On the right, there is an 'Advanced search' sidebar with multiple dropdown menus and a search button. Red boxes and arrows highlight specific UI elements: 'Hotel', 'Country – City – Stars field', 'Special field', 'Hotel description (intro text)', and 'Book now and Read more button'.

Hotel

Country – City – Stars field

Special field

Hotel description (intro text)

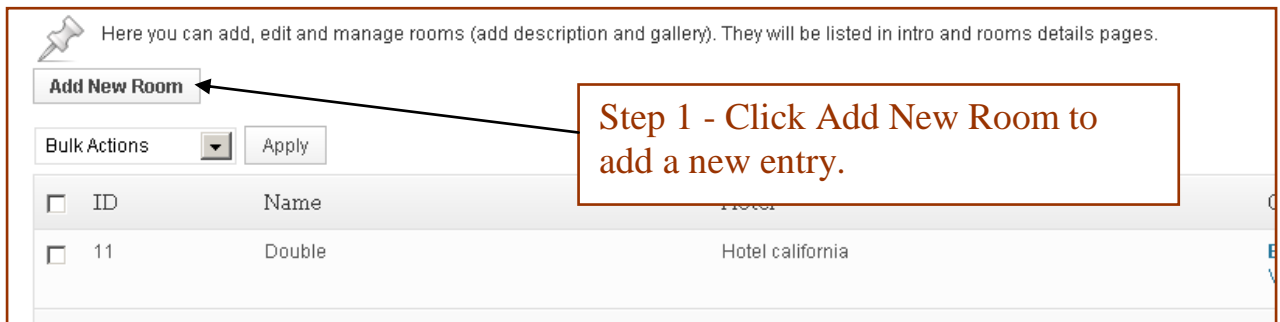

Book now and Read more button

Your hotel offer will appear in your website in a list (the look will depend on your theme) , remark hotel brochure, map view and contact options.

- Clicking on **Hotel brochure** the plugin will open a new window with the pdf brochure.
- Clicking on **Map view** the client will see a window with the hotel location.
- **Contact** option will allow the client to send a message easily from the hotel page frontend, every hotel has a customized contact form.

9. Rooms management

Use rooms management for managing your resource in a very simple but effective manner.

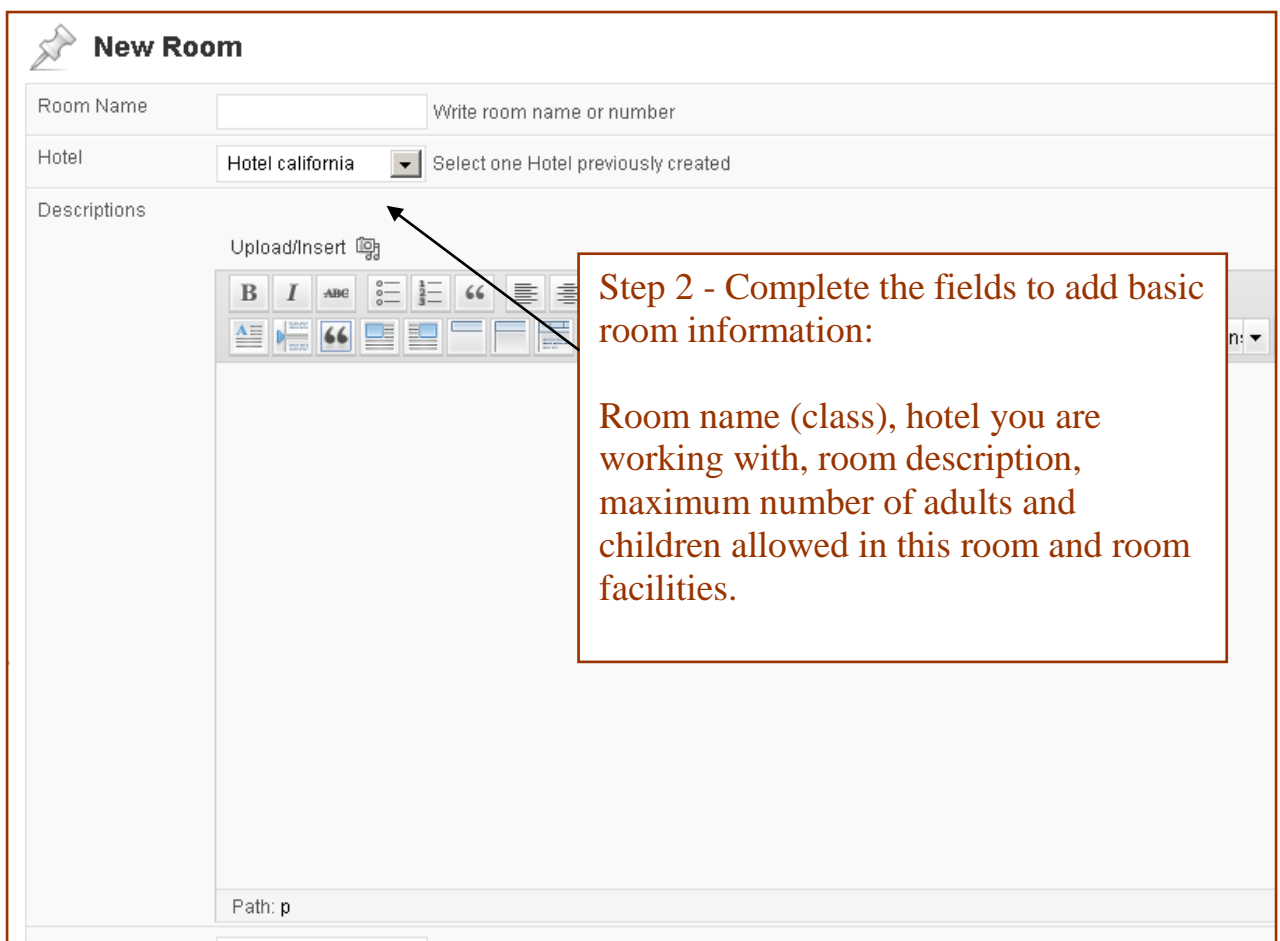

Here you can add, edit and manage rooms (add description and gallery). They will be listed in intro and rooms details pages.

Add New Room

Bulk Actions ▼ Apply

<input type="checkbox"/>	ID	Name	Hotel
<input type="checkbox"/>	11	Double	Hotel california

Step 1 - Click Add New Room to add a new entry.

New Room

Room Name Write room name or number

Hotel Hotel california ▼ Select one Hotel previously created

Descriptions

Upload/Insert

Step 2 - Complete the fields to add basic room information:

Room name (class), hotel you are working with, room description, maximum number of adults and children allowed in this room and room facilities.

Path: p

Add as much rooms as different types your hotel has, for instance single room, double room, standard, luxury room ...

Complete the room information with a description, number of adults and children allowed, services and the default price for the room on a nightly basis.

Set number of rooms as the total number of rooms of this type that the hotel has, if you leave it

empty, the clients will receive the message

"Sorry, the room is not available, please select another date and make a new reservation ".

Because there is not room available, in fact there are not rooms!!.

IMPORTANT:

- Take special account with the field's number of rooms and price.
- The season's rate has priority over the room rate. The system will use the room price only if price per season is not set for this room.
- Create as much room as you need, the plugin can manage unlimited rooms.

In your website your clients will see the list of rooms you have introduced for every hotel:

The screenshot shows the 'Hotel Luxury' website. The main content area displays a room listing for 'Luxury Suite' in 'Florida - Bradenton' (3 stars). The room description includes a thumbnail image and placeholder text. A 'Book Now' button is visible next to the description. To the right, there is an 'Advanced search' sidebar with several 'Select' dropdown menus and a 'Search' button.

Annotations on the screenshot:

- Hotel name:** Points to the 'Hotel Luxury' header.
- Room with thumbnail, description and book now button:** Points to the 'Luxury Suite' listing.
- the client will see the price per room x season. If price per season is not set, message "No season Price" is displayed.** Points to the price information in the table below.

Season Name	Date start	Date End	Price
Autumn	2012-09-01	2012-12-31	\$ 75

10. Season manager

Most of the hotel's rates fluctuate per season.

Use this menu to manage the different room rates per hotel and season.

IMPORTANT

Remember the rooms should be created before introduce seasons, because the rate (price) is the cost/price for the accommodation based upon a fee for each room.

 Here you can add, edit and manage season for your Hotel. Season price can be set in "Season price" menu.

Add New Season

Bulk Actions  Apply

<input type="checkbox"/>	ID	Seasons	Hotel	Room	Date start

Step 2 - Insert the season name, date start and end(with a date picker), choose a room, introduce the rate(price) and click SAVE.

11. Rooms availability: Manage availability option

The room availability allows you to set up the dates where the room is open to clients.

Important

- The system will offer rooms only if the room is available, be sure you have introduced some available period to all your rooms.
- Room available doesn't mean free, if there is a reservation the room is booked but available. Rooms are not available in maintenance hotel periods, for instance.

 Here you can setup and manage availability for every rooms. It is necessary to set first of all "available state" for you rooms to make active b

Add New Availability

☐ yes

☐ no

Step 2 – add client information – send a notification email and click “book” button.

15. Widgets & Shortcodes

JSMultihotel comes with specific bridgets that add website visitors' visual and interactivity options and features.

Widgets can be added, removed, and rearranged on the Word Press Administration Appearance > Widgets panel.

A short code is a Word Press-specific code that lets you do nifty things with very little effort.

The JS-MultiHotel plugin includes 3 useful functions that can be quickly and easily implemented through the use of short codes and widgets:

Registration page

Build a registration page is very simple, go to Word Press dashboard -> add a new page and insert the short code [register]

Navigate to Appearance / widgets, activate js hotel login (drag and drop to sidebar)-> in page parameters select the registration page previously created

Country search page

To build an advanced search page, create a new page and insert the short code [regionsearch]

Navigate to Appearance / widgets and activate js hotel search by country (drag and drop to sidebar)-> in page parameters select the page previously created

Advanced search page

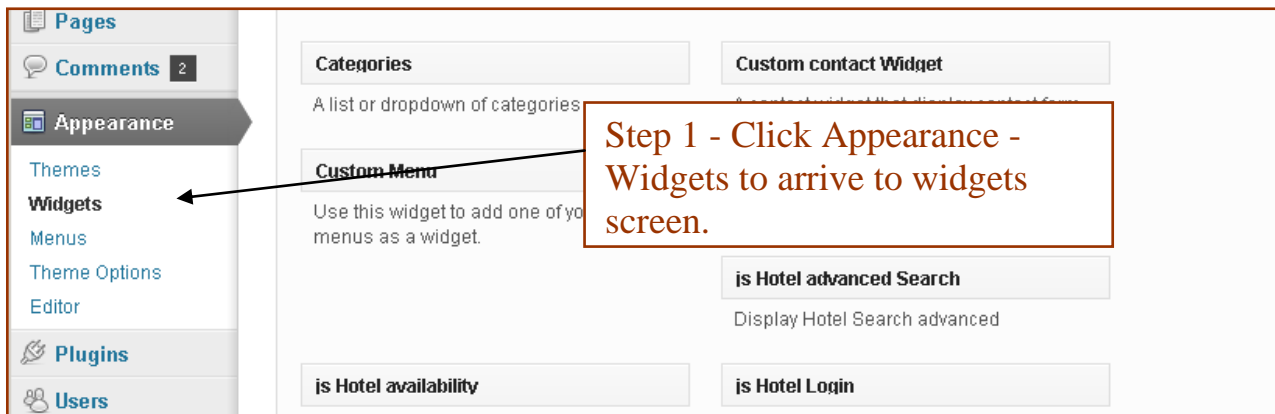

To build a search results page with Google maps create a new page in Word Press and insert the short code [search]

Navigate to Appearance / widgets and activate js hotel advanced search (drag and drop to sidebar)-> in page parameters select the page previously created

Widget name	Shortcode
JS Hotel Login	[register]
JS Hotel Search	[search]
JS Hotel Advanced Search	[regionsearch]

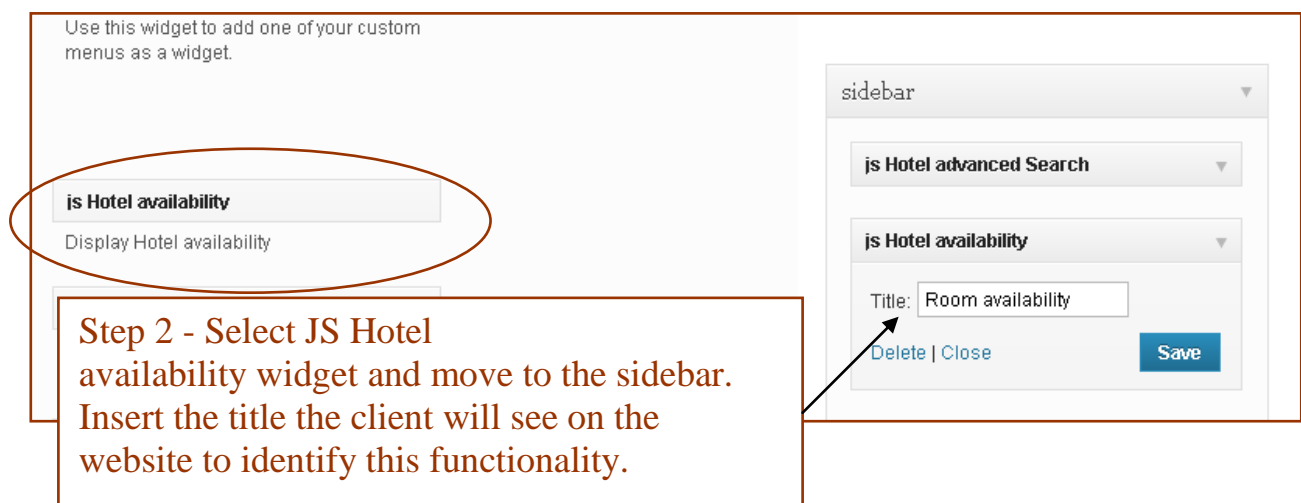

15. Widgets & Shortcodes (continue)

Installing widgets is very easy.

Select the widget you want to install and move it to the sidebar.

The most important widget is **JS Hotel Availability**, a calendar that is able to show when a room is available or not (this calendar is automatic connected with every rooms).

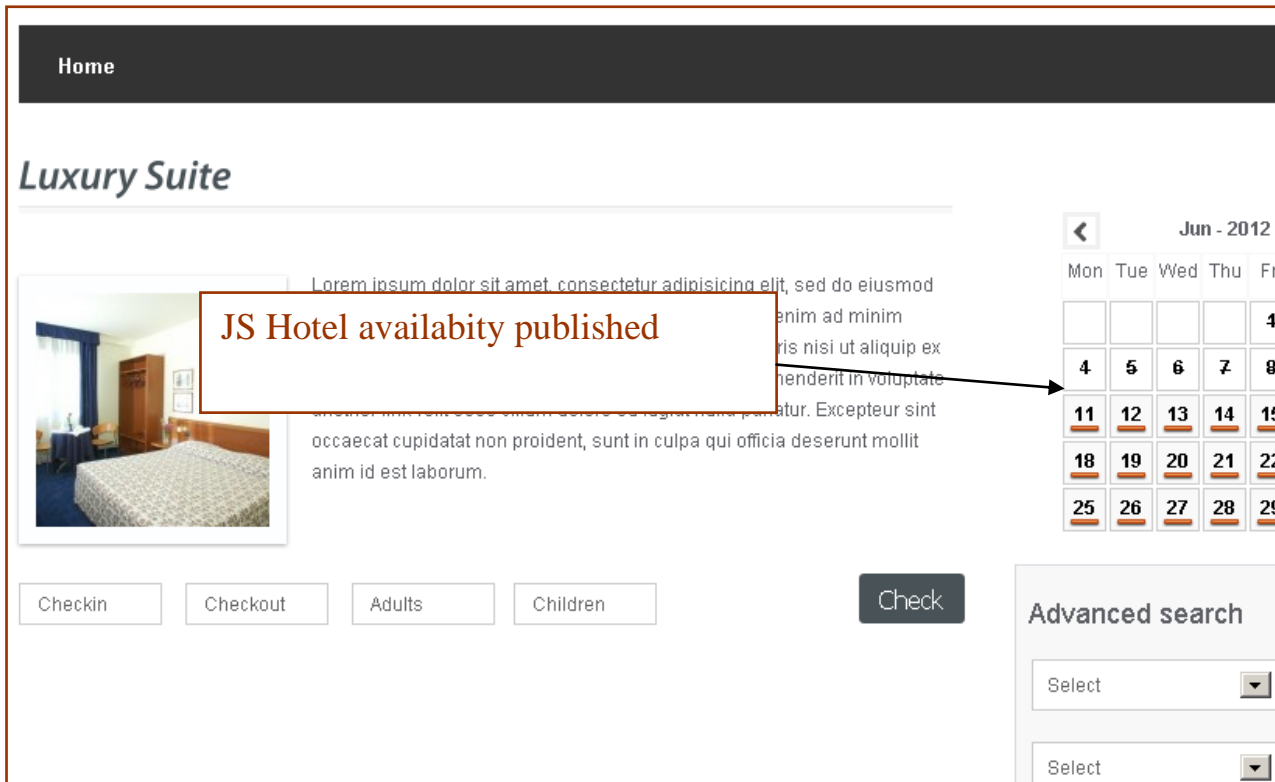

IMPORTANT

The widgets sidebar is different depending on the theme. Don't mind if your sidebar doesn't look like this image, all the themes have the widgets options. Just move the widget to the sidebar you will use in your posts.

15. Widgets & Shortcodes (continue)

Frontend view – room and his availability calendar

There is 3 state available for this calendar (days are marked with different color):

- Room available (marked with green)
- Room unavailable (marked with yellow) – for example when the hotel is closed
- Room booked (marked with red)

15. Widgets & Shortcodes (continue)

Other useful widgets are:

JS Low Cost - Displays low cost hotels.

JS Map - Displays hotels location.

JS Hotel Admin - Displays hotel admin link.

JS Hotel Login - Displays hotel login.

JS Hotel Search and JS Hotel Advanced Search - Utility to search hotels.

JS Popular - Displays the most popular hotels.

Follow same installation process for all the JS widgets, as described below.

16. How to display in your website the hotels

If you followed the instructions on how to create new hotels, now it is possible to show them in your website.

You can achieve this result following 2 easy step:

- Create a new Wordpress page and insert this shortcode: `[lasthotel]`
- In Wordpress dashboard navigate to wordpress --> settings --> reading, choice in Front page displays, "A static page" option, select the page previously created and save

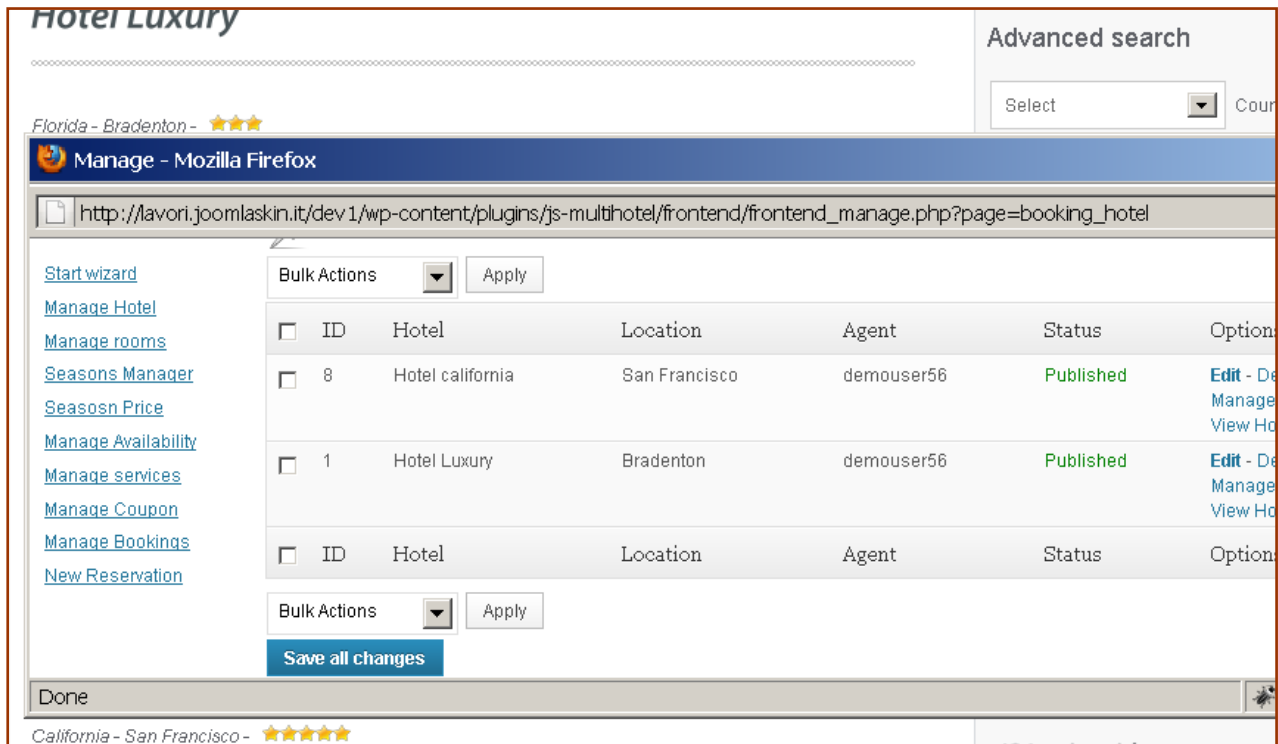

Step 2 – navigate to settings → reading choice in Front page displays, "A static page" option, select the page previously created and save

17. Hotel owner role in JS MultiHotel plugin

Members can create accounts and add their own Hotels to your website, a special permission role for hotel owners is available and it is managed by site admin. When members of the group "hotel owner" are active they do not have to login in backend to manage their hotels and reservations, they can access in frontend using the JS Login widget.

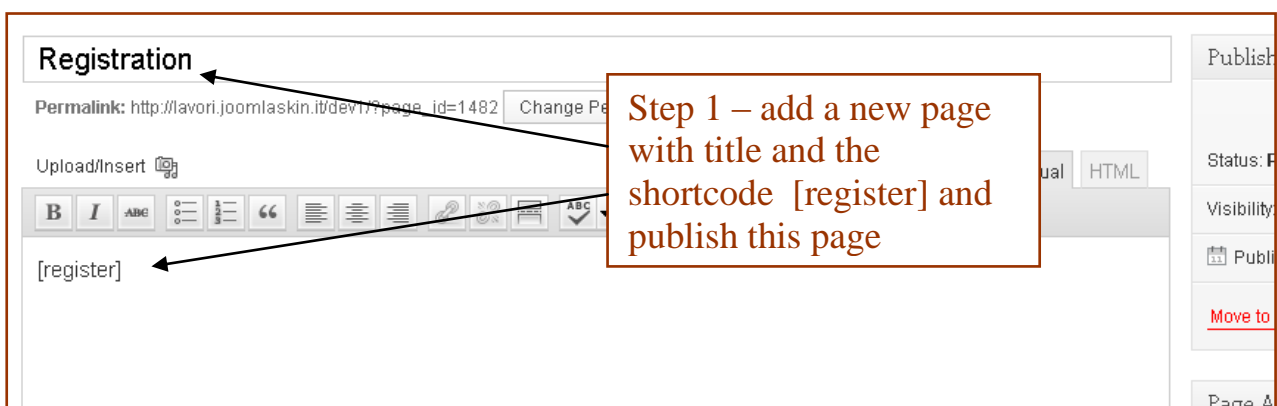

The screenshot shows a hotel listing for "California - San Francisco" with a 5-star rating. It includes a "Hotel Brochure" button, a "Ma" button, and a photo of a hotel room. A text box explains that the JS Login widget is published, allowing hotel owners to manage their hotels via a popup page. To the right, the "JS Login widget" is shown with options: "Hi admin", "Manage Hotel", and "logout". Below the widget are "Book Now" and "Read More" buttons.

The popup page

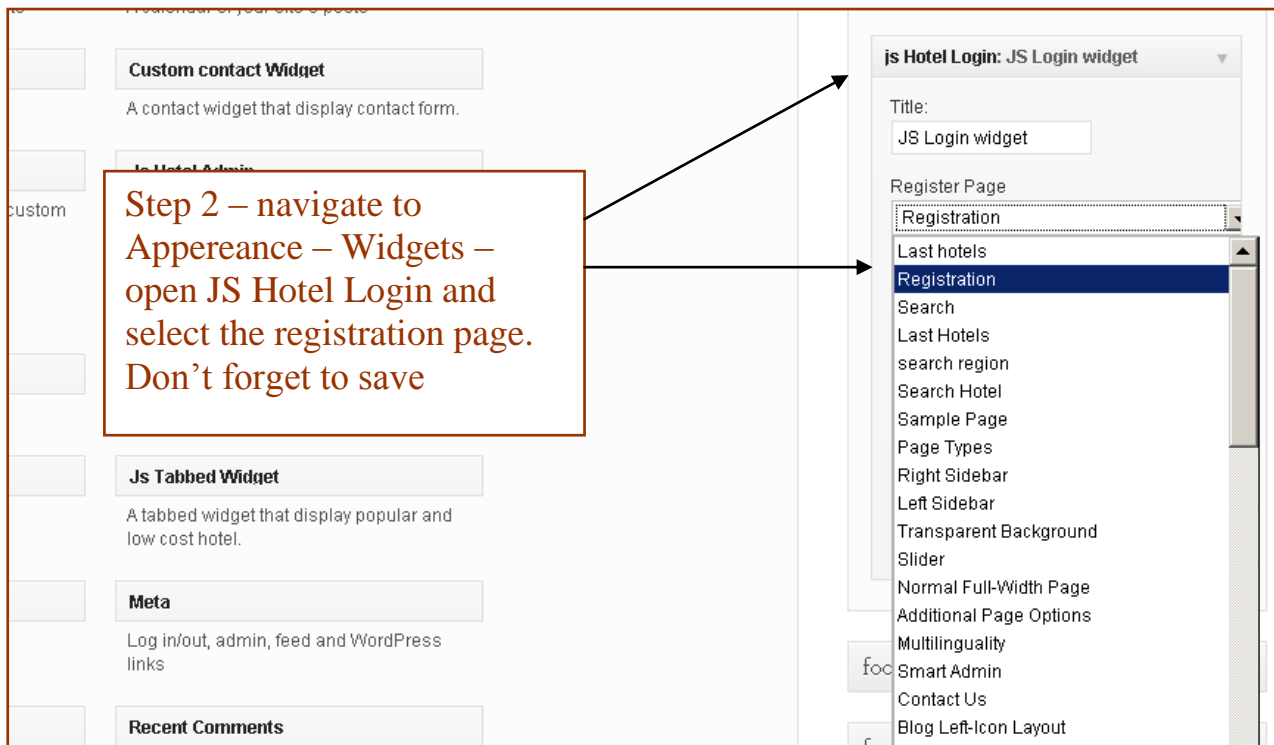

How to manage hotel owner registration

First of all we need to add a new registration page in Wordpress
In your Wordpress dashboard navigate to pages → add new

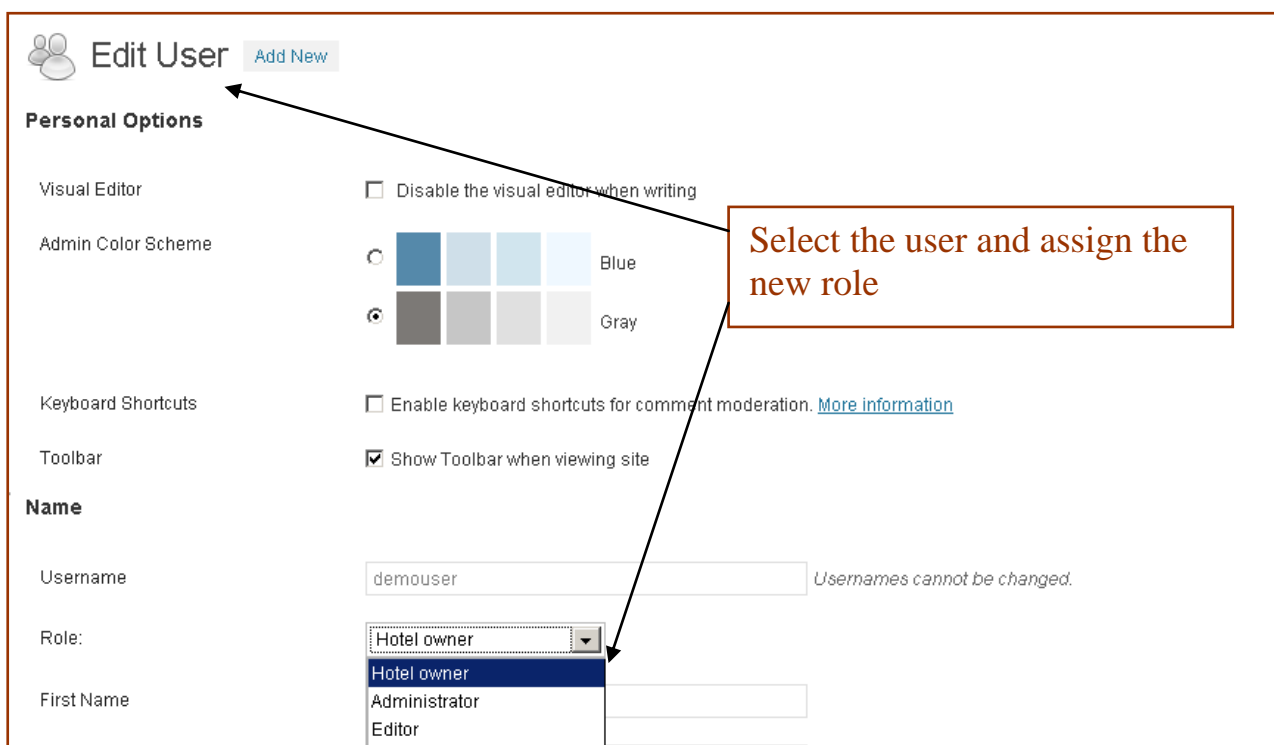

In Wordpress dashboard open Appereance → Widgets → JS Hotel Login select the page previously created and save

Set special permission to members

When a new user make a registration using this page is not able to add new hotel before the admin assign a special permission role called "Hotel owner".

Now hoteliers can begin to add their Hotel without backend login (don't forget to

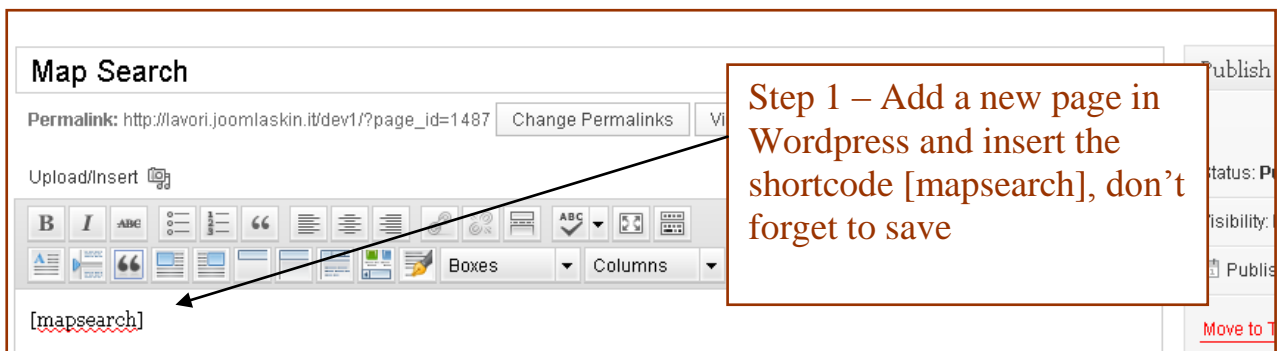

publish JS Login widget!)

18. google map search result page

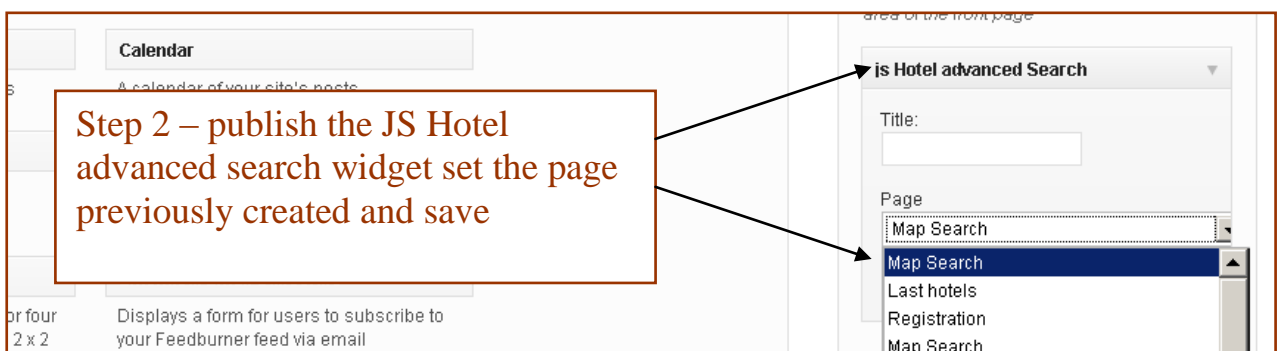

Our plugin can help you to manage unlimited hotels and give option to user to quickly search for accommodations by country and availability (search result are grouped by hotel or by availability).

To make this tool available for client simply follow this step:

- Add a new page in wordpress and insert the shortcode `[mapsearch]`

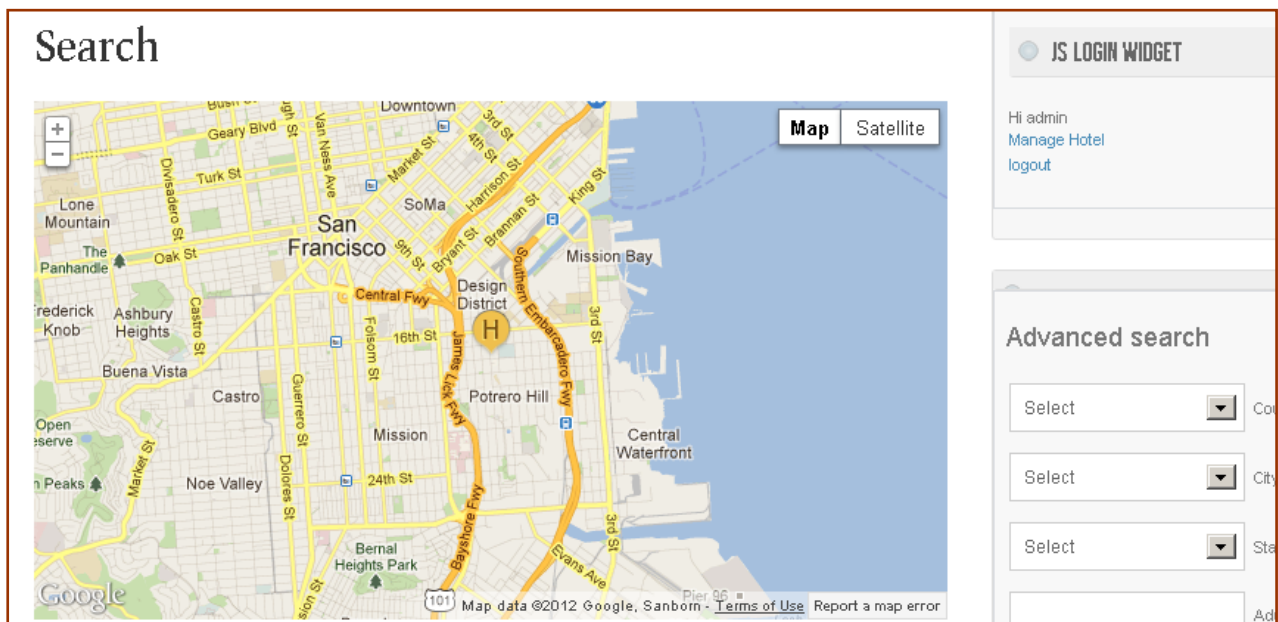

- Navigate to Appereance → Widget and publish the **Js hotel advanced search** Widget, in this widget select the page previously created.

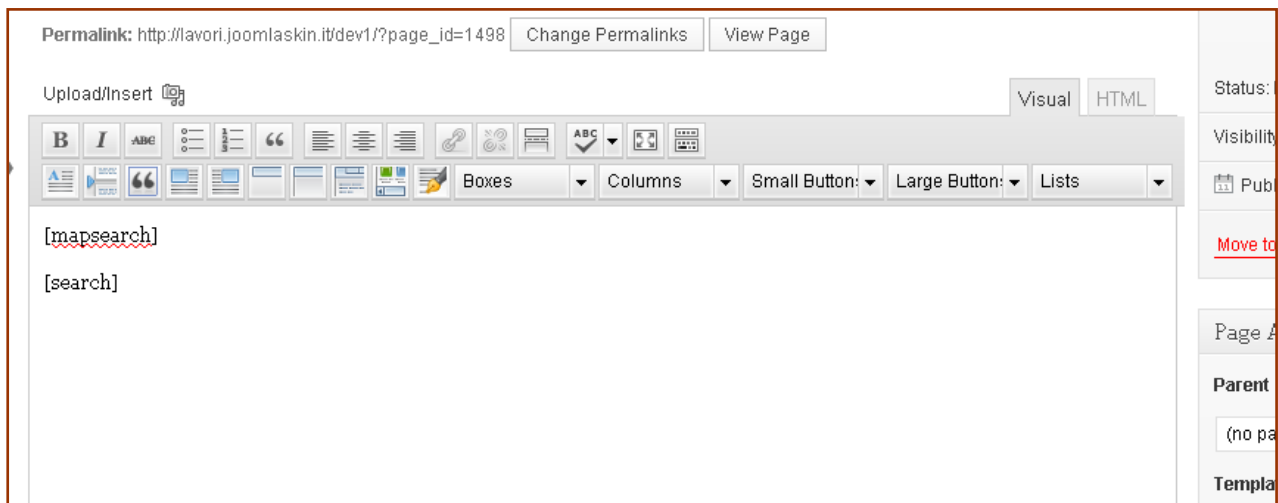

With this widget active when a user make a research this is the results page, a google

map with Hotel marked.

Important

The shortcode `[mapsearch]` show only a google map with icon for every Hotel, if you want to have google map and a list of Hotel with intro text add also the shortcode `[search]`, see the image below:

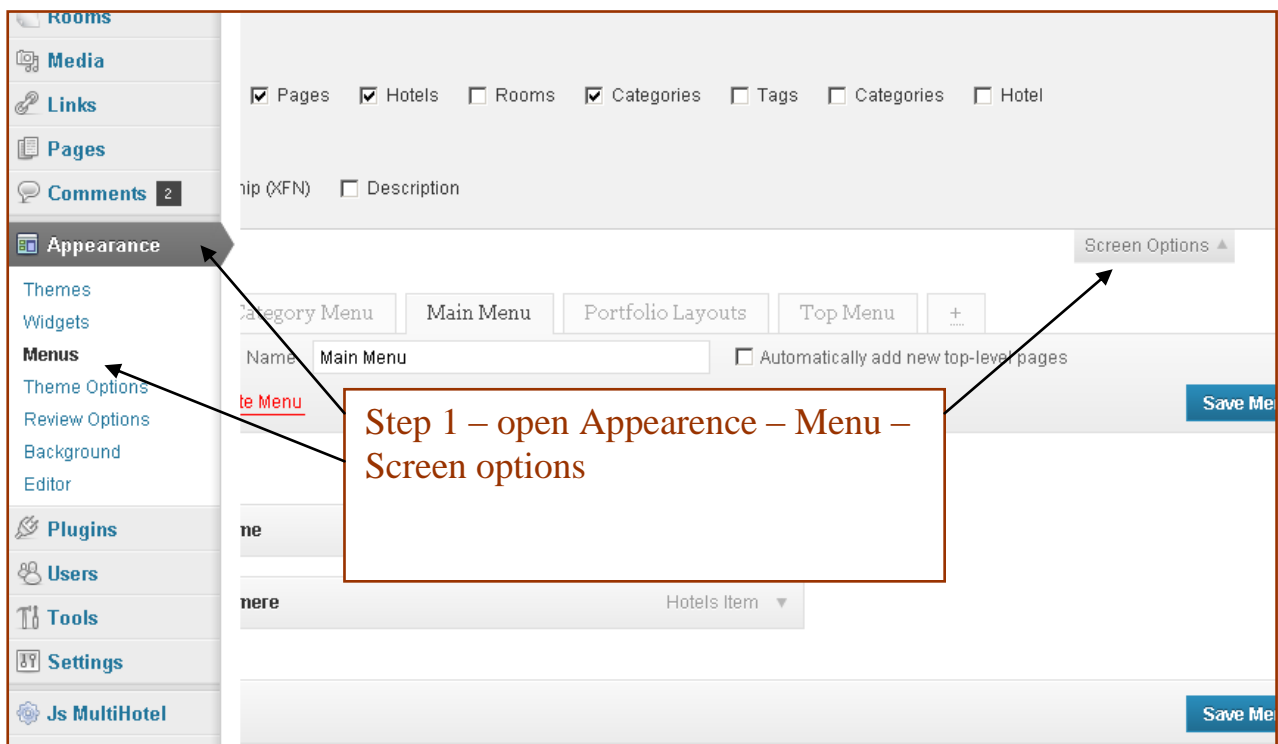

19. work with a single hotel

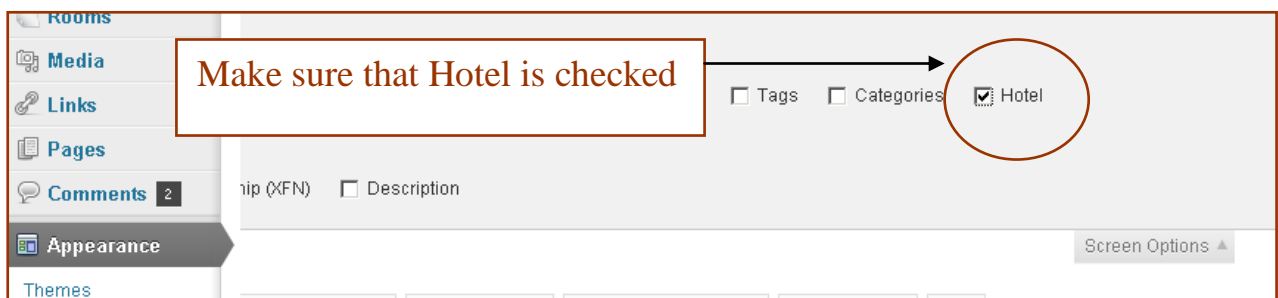

It is of course possible to use our plugin to manage a single hotel, in this case you need to publish on the site only a list of rooms, or single room (each with its own calendar availability). Doing this is very simple, the following procedures should be used

20.1 list of Hotels room

Navigate to **Appearance – Menu** and open **Screen option** (you can find it on top right of your Wordpress backend)

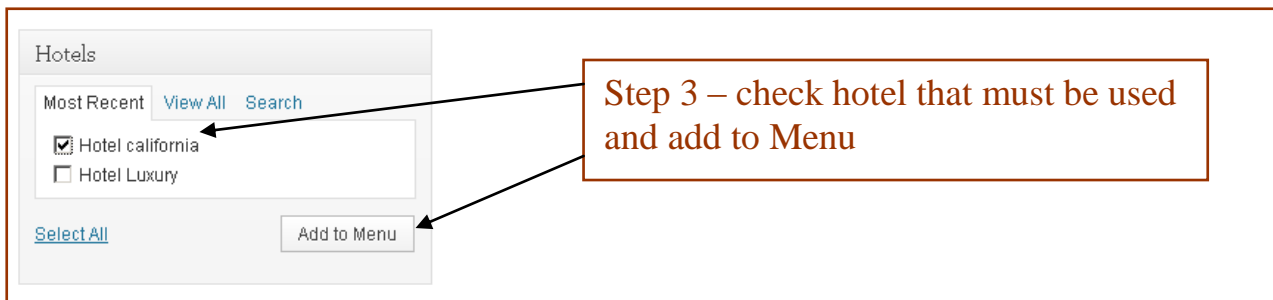

Step – 2 activate hotel

At this time a new list of available Hotel will be available as you can see in image

below and you need only to check the hotel and add to menu

Now you can have a list of room available on your website.

Important

If you want to link single rooms use the same procedure, but instead to set active Hotel in Screen option you must activate Rooms.

20. Support

Joomlaskin provides you all the support you need, from questions about the use of this plugin to tailor-made solutions to you.

Contact us if you need our help or perhaps you may have a suggestion for an enhancement or feature request, please send a direct message to our CodeCanyon profile page:

<http://codecanyon.net/user/joomlaskin>

If you are having problems or the plugin is reporting errors, please send us a message using our support option on JSmultihotel menu or open a ticket in our system

<http://www.joomlaskin.it/support/>

The entire request will be answer in about 24h – 48h.
