About The Script

Using SoftdatePro dating script you can setup your own dating website for singles looking for love.

It's easy to use, can handle tens of thousands of members, and of course we includes complete technical support, professional installation, setup and a no questions asked money back guarantee!

SoftdatePro dating script is developed in PHP and uses a MYSQL database to store data; all you need to get started is a domain name and a hosting account.

Soft Date Pro is tailor made **PHP online dating software** for one and all. You can use the software of our website to create your personal dating, Group dating, Conjugal sites and sites for grownups. Our soft ware is ready to use and can be modified as per your requirement. These features make the software more appealing for your group.

SYSTEM REQUIREMENTS

- **Operating System**: Linux or Windows hosting platform. Linux is the recommended system...
- **Web Server**: Apache or IIS. You can run it locally for testing using the XAMP system.
- **Scripting Language**: PHP 5.1.0.0
- **Database**: MySQL 4.1 or above.
- If you are unsure whether your server meets these requirements simply contact us with tour FTP details and we'll check for you free of charge.

Basic Features
The most prominent features in your dating software: payments, designs.

Searches
There are different search options through which your members can meet other people at other sites.

Communication
Various modes of communication used to interact with people: chats, messages, calls and much more!

Users
We have different opportunities for your site members to meet people of their choice

Administrator
Administration part is easily manageable: manage your users, payments, site content and modules here.

Hosting Account Requirements
What you will need to get started:

- 1 Domain Name
- 1 Hosting Account
- 1 Softdate PRO Script

A hosting account is a package that allows you to install web site software so you can access your web site anywhere in the world via the internet. If you do not have a hosting account, you can purchase a hosting account elsewhere and use that.

Installation

Introduction

This is an installation guide for SoftdatePro software. If you have any problems or errors during installation, please send an email in support forum.

1. Requirements

Please ensure your web host meets the application requirements.

- Linux, UNIX or variants preferred.
- Apache 1.3.2 or above either on Linux, Unix or a variant
- PHP v5.1.0 or above
- MySQL v4.0 or above

2. Uploading Files via FTP

Unzip the SoftdatePro software package onto your local hard drive. If you don't have Winzip, you can download it for from winzip.com. Using an FTP program (such as Filezilla, which is free, or a commercial package such as CuteFTP), login to your web server and copy the SoftdatePro software files across into your base website directory. This directory is commonly called 'public_html', 'html', 'www' or 'website_html'. If you're not sure what it is, your webhost provider will be able to tell you.

3. File Permissions

SoftdatePro software requires the following files/directories to have 'write' permissions set. If you're running on a Linux or Unix web host, you can use your FTP program and use the 'CHMOD' ('Change Mode') function to grant write permissions.

'public_html/upload_pic(CHMOD 777)'
'public_html/images/homeimages (CHMOD 777)'
'public_html/images/homeimages/thumbnail (CHMOD 777)'
'public_html/images/logo(CHMOD 777)'
'public_html/images/upload_pic (CHMOD 777)'
'public_html/images/upload_pic/smallthumb (CHMOD 777)'
'public_html/images/user_images (CHMOD 777)'
'public_html/images/user_images/bigthumb (CHMOD 777)'
'public_html/images/user_images/smallthumb (CHMOD 777)'

4. MySQL Database

SoftdatePro software makes use of a MySQL database to store your data. This database must be created before you run the SoftdatePro software installation wizard. Your database user account should also have full grant
access to that database. You will need the database connection details during the setup wizard. Setting up your database may differ with your webhost and what software they use for your webhosting control panel, if you have any problems setting up a database please contact your hosting provider.

5. Change Configuration file

Open configuration file and change databse Name, user name and password.
'Public_html/config/config_global.php'

Change

define ("DBUSER","Database User");
define ("DBPASS","Database password");
define ("DBNAME"," Your Database Name ");

6. Installation Completed

Congratulations, you are now ready to use SoftdatePro software.
