## What is Music Cloud Player?

Music Cloud Player is one of the best solutions if you want to start your own music portal. It has a beautiful and intuitive interface built with the latest development tools to make it as easy to use for you.

## Requirements

Music Cloud Player is only supported on PHP 4 and up, you need a database as well. Supported database is MySQL. You can use PhpMyAdmin to manage your database.

## Installation steps

1. Download a .zip file of the Music Cloud Player from Codecanyon
2. Extract MusicCloudPlayer\_1.zip
3. Upload the contents of the MusicCloudPlayer.zip file to your web server by your FTP client
4. Update the database info in includes/db.php and your URL path in includes/config.inc.php
5. Run the SQL included in database.sql. Many people use phpMyAdmin for this, if you can't do it yourself contact your host.
6. Change the permission to 777 for the folder /uploads

## Administration

You can login to manage your Music Cloud Player : <http://www.yourdomain.com/admin/>

Login : admin

Password : admin
